AGENDA - DAY 4

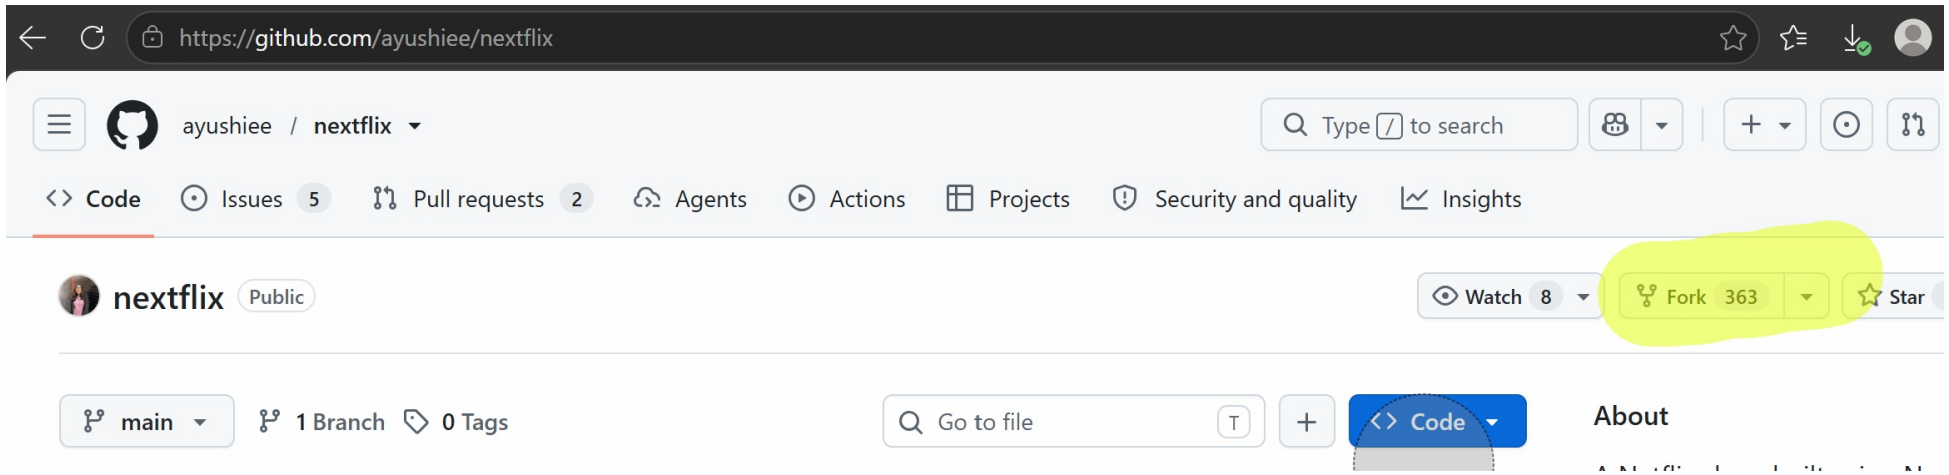

FORK
FORK VS CLONE
GITHUB ISSUES
END TO END WORKFLOW

ASSESSMENT :
10 case study
50 mcq

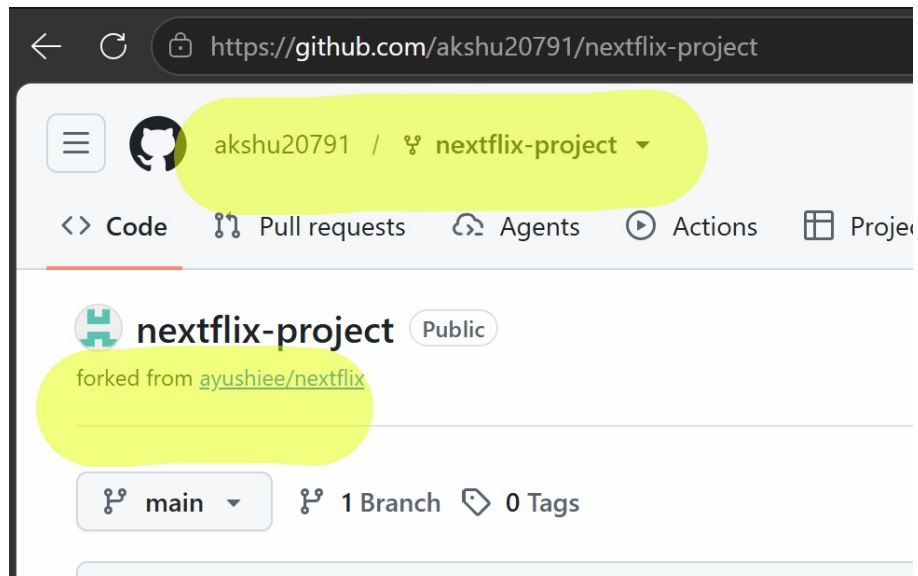

Solution : Tomorrow same time

FORK :

A fork is a copy of someone's else Github repo under your own github account.
You can make changes to your copy without directly modifying the original repo

Click on fork -->create fork

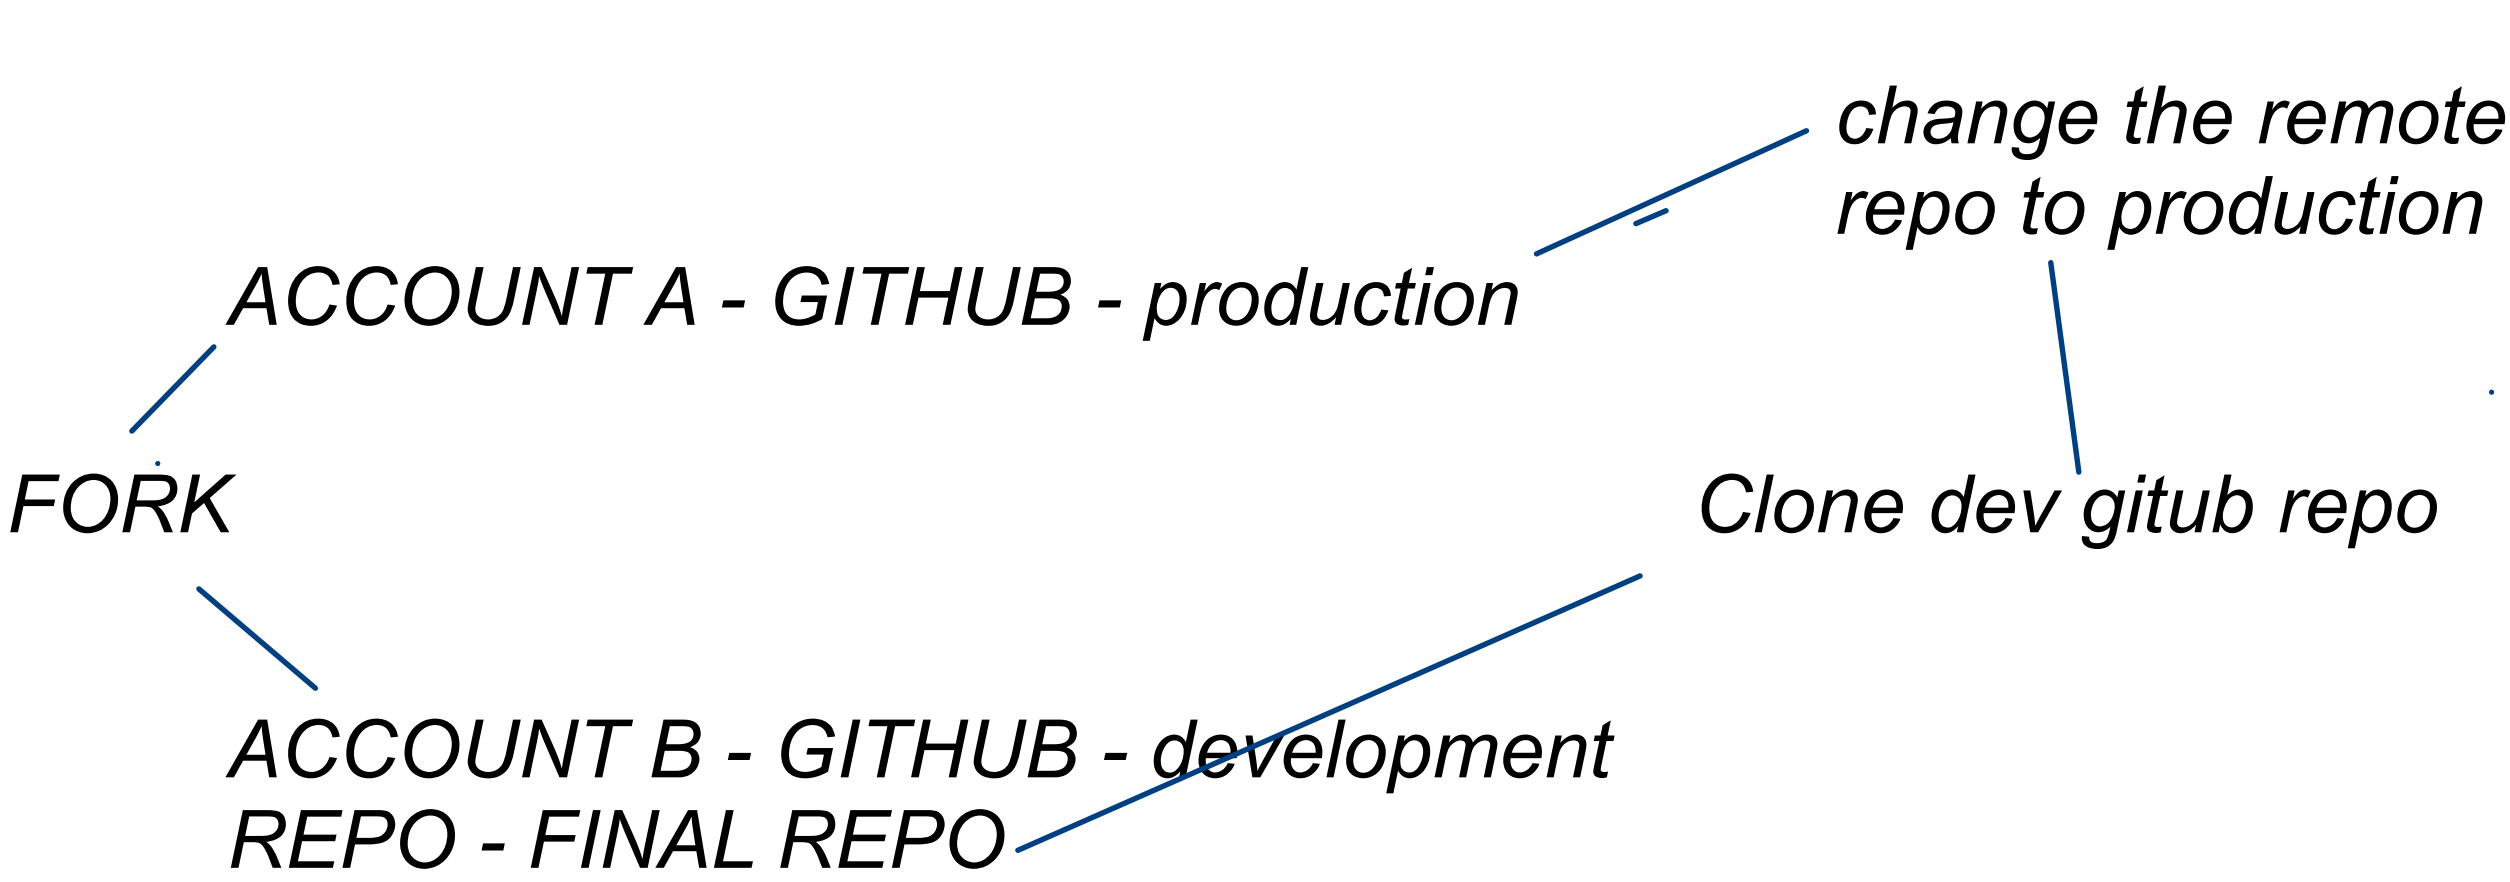

Fork vs clone

Fork creates the copy of a repo on your github account

Clone:

You download the repo to your laptop so that you can work on it locally

Go to git bash in your laptop
git clone githubrepo link

change the remote repo to production
ACCOUNT A - GITHUB - production
FORK
Clone dev gitub repo
ACCOUNT B - GITHUB - development
REPO - FINAL REPO

NETFLIX PROJECT

TESTING TEAM
QA TEAMS
DEV
DEVOPS
etc etc

GITHUB ISSUES

Feature used to track bugs and issues in your project

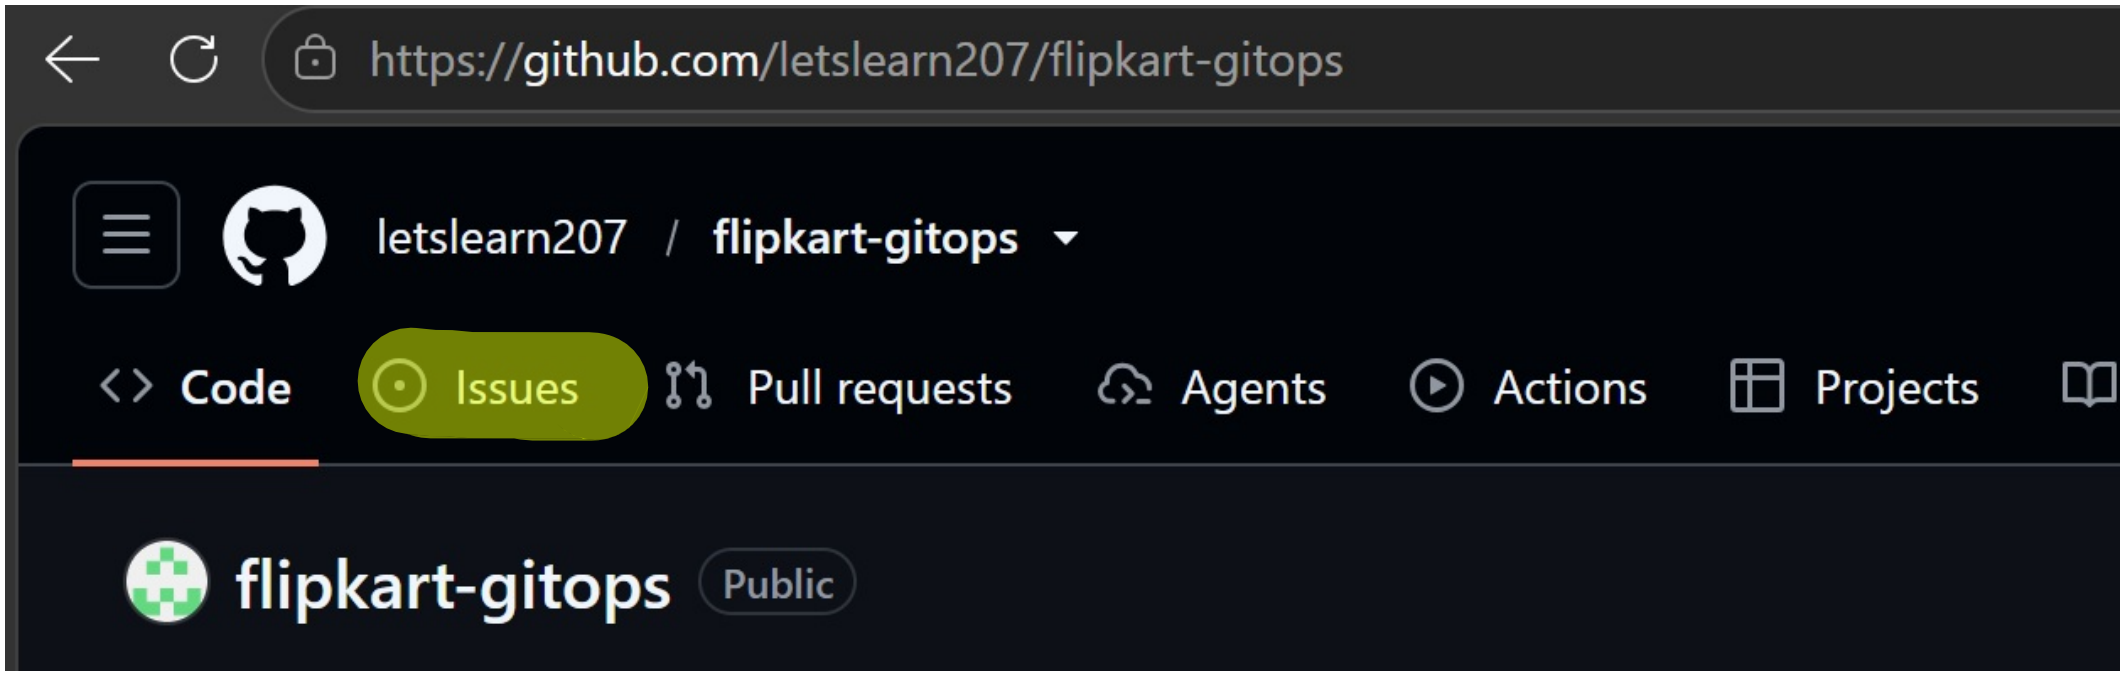

Think of github issues as a task managment system for developers where team records what needs to be fixed or developed and tracks its progress

Ecommerce website : Joe-tshirts.com

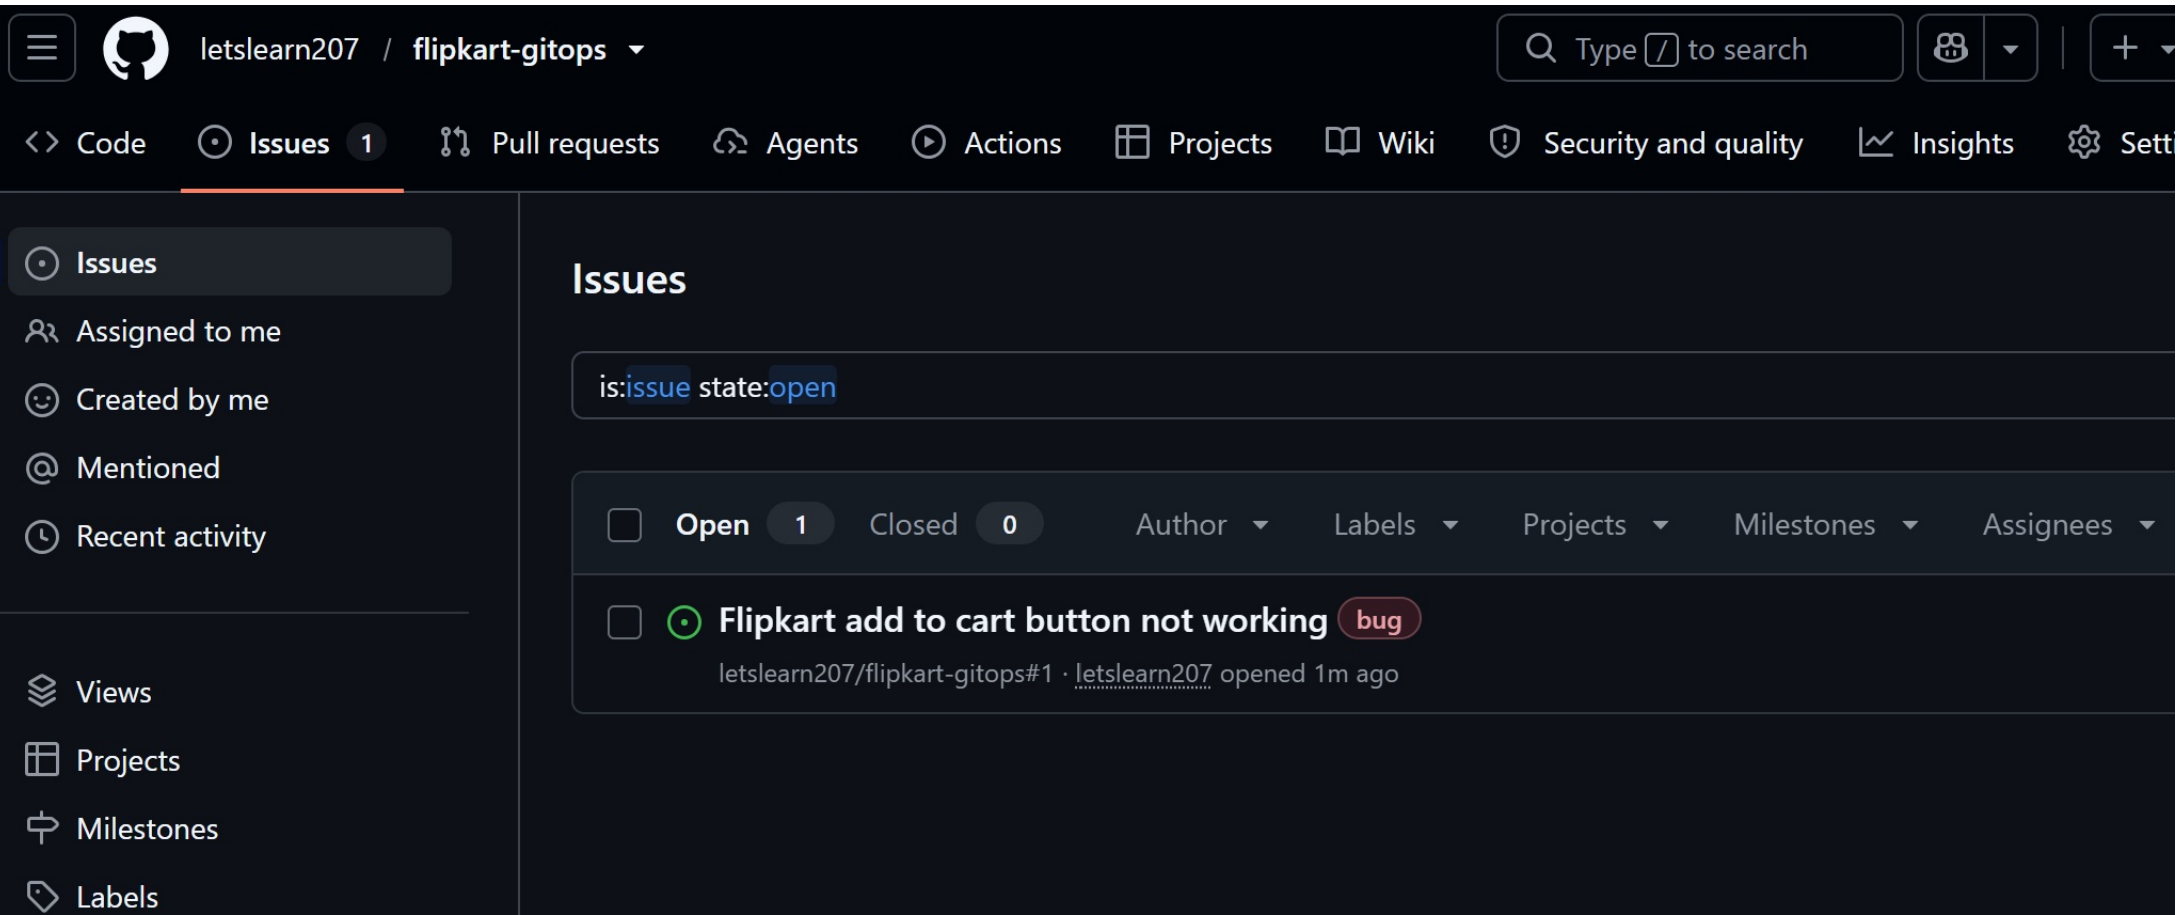

Issues #1 : Checkout button is not workking
Issues #2 : Add product search feature
Issues #3: Website loads very slowly

These issues can be tracked, maintained via github issues

A typical github issue includes:
Title
Description
Assignee : Developer who is responsible for the task
Labels : bug, enhancement , or documentation
Milestone
Comments
Status : open /close

Q1

akshu20791/addressbook-cicd-project (ALIAS: addressbook)

This is the github repo .....

Task 1: I dont want you to fork addressbook repo...
Create a new repo in your github account
clone your repo and addressboook repo
copy the content of addressbook repo to your repo
push the version of the code to your repo

Q2:
Now you have the code in your own gitub repo

create a branch
make a file named :
testfile1.txt with content "hello worlld"
Save it as a version
and push that branch to github

Q3: Raise the PUll request
Q4 : Put the feedback as a comment that the spelling of world in testfile1.txt is wrong
Q5: Update the spelling ...save as a version and push it back to github
Q6: Check the PR again

Q7: Approve the PR and let the code merge on master branch

Q8: Your manager says ...we dont want master as our default branch as we are working in dev env and default branch should be dev and not master...how will you take care it ....

rather then master/main as a default branch i want now dev with the same content which was there in master/main branch
