🛠️ Practical Questions:

1. **Initialize Git:**

    - Akshat wants to track changes in his project.
      Q: What command should Akshat run inside the `portfolio` folder to initialize a Git repository?

      git init

2. **Check Git Status:**

    - After adding the file `index.html`, Akshat wants to see the current status.
      Q: Which command should he run?

      Git status

3. **Add file to staging:**

    - Akshat wants to track `index.html` in the next commit.
      Q: What is the Git command to stage this file?

4. **Commit the changes:**

    - Akshat added his name to the webpage and wants to save this version.
      Q: What command should he use to commit with the message "Added my name to homepage"?

5. **Create a GitHub repository:**

    - Akshat creates a new repository on GitHub named `portfolio-site`.
      Q: What command should he use to connect his local Git repo to the GitHub repo?

6. **Push to GitHub:**

    - He now wants to upload his local commits to GitHub.
      Q: What Git command should he run?

7. **Make a new branch:**

    - Akshat wants to experiment with a new layout without disturbing the main code.
      Q: What Git command creates a new branch called `new-layout`?

8. **Switch to new branch:**

    - After creating the new branch, he wants to work on it.
      Q: What command does he use to switch?

9. **Raise PR:**

   Create file and commit file in the branch

   Push the code to github branch

   Raise PR

   Approve PR

10. **View commit history:**

    - Akshat wants to see all the changes made so far.
      Q: Which Git command shows the commit history?
