Agenda:

> Introduction to Pull request
> PULL request workflow
> Code review basics
> Github issues
> Forking
> Fork vs clone
> Repo collaboration
> Public and private repos
> Readme and project documentation
> Basic github project workflow

Practicals:

> Create a feature branch and raise a Pull request
> Review and merge the pull request
> Create and manage Github issues
> Complete a mini project using the complete github workflow

Revision (DAY 1)
Git -> s/w which is downloaded in your laptop
github -> save and maintain version over internet

Folder
-> touch file1
-> git init
-> git status
o/p: file1 (untracked)
-> git add file1 #start tracking the file
->git status
o/p: file1 (tracked)
-> lets put some content in file1
-> git status
o/p: file1 is modified
-> git diff file1
#o/p will show which line is exactly modified
-> git add file1 # tell the git to start tracking the latest content
-> git config --global user.name "akshat"
-> git config --global user.email "akshat@gmail.com"
-> git commit -m"my first commit"
-> git log # show the versions

Day 2:
Created github repo
-> Private repo
-> Public repo
-> readme file
-> .gitignore

LAB 1: When you start from scratch on the repo

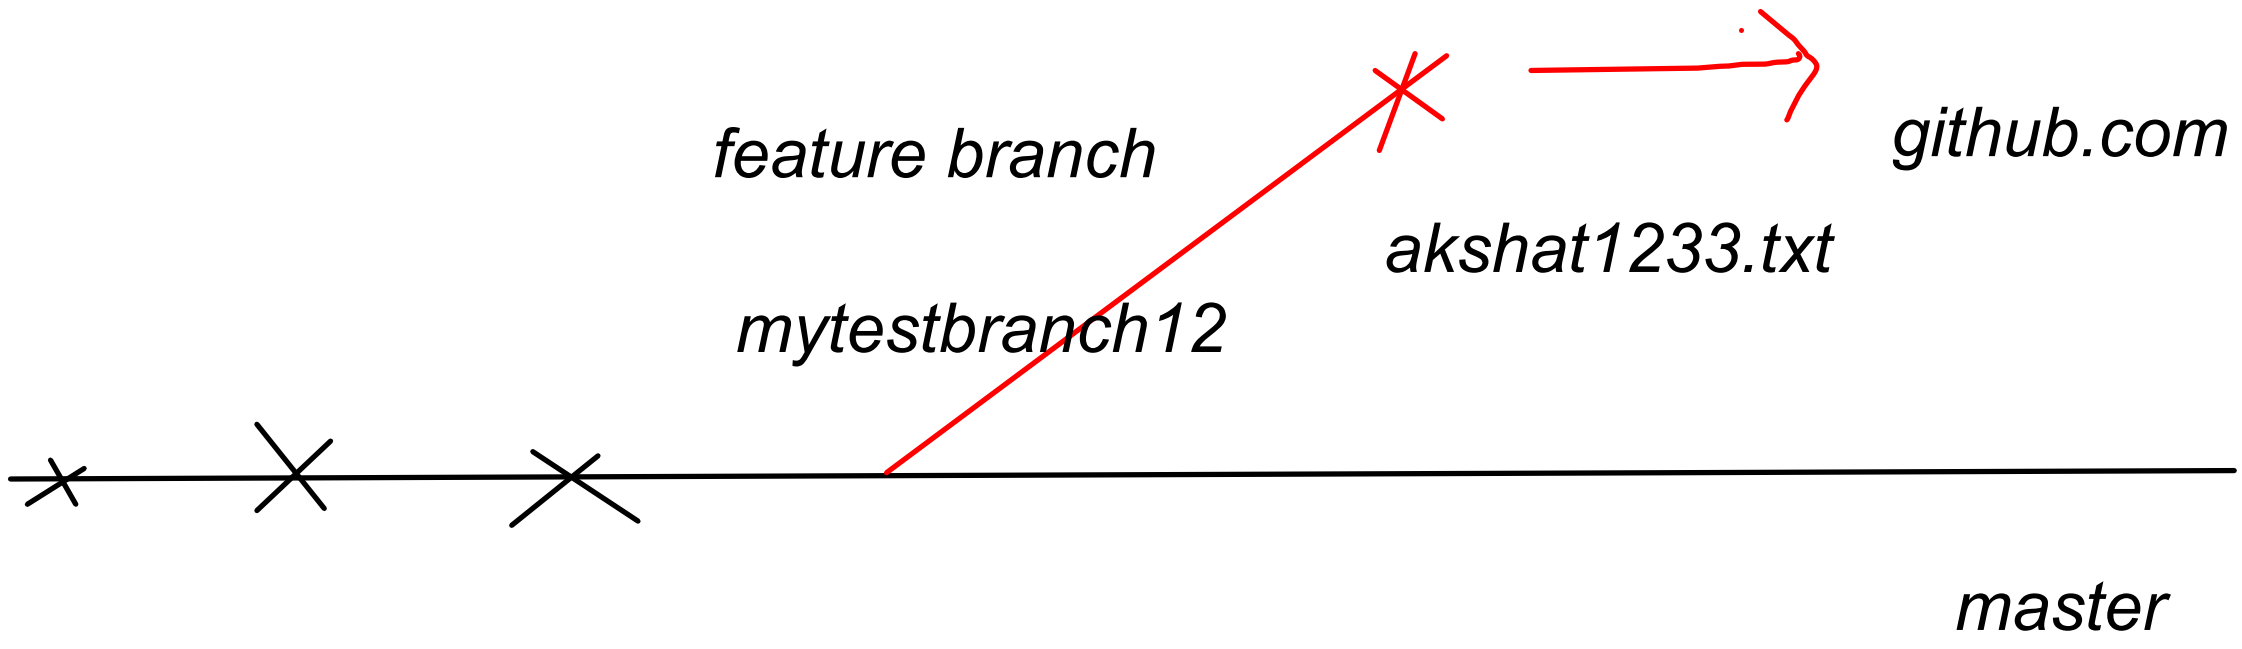

lets say we created github repo with name : testrepo
github.com/username/testrepo

git remote add origin github.com/username/testrepo
git remote -v
git push -u origin master
A pop up will appear where you need to put token (PAT)
you will be able to push the code to github

#lab 2: Joined a project and then start working

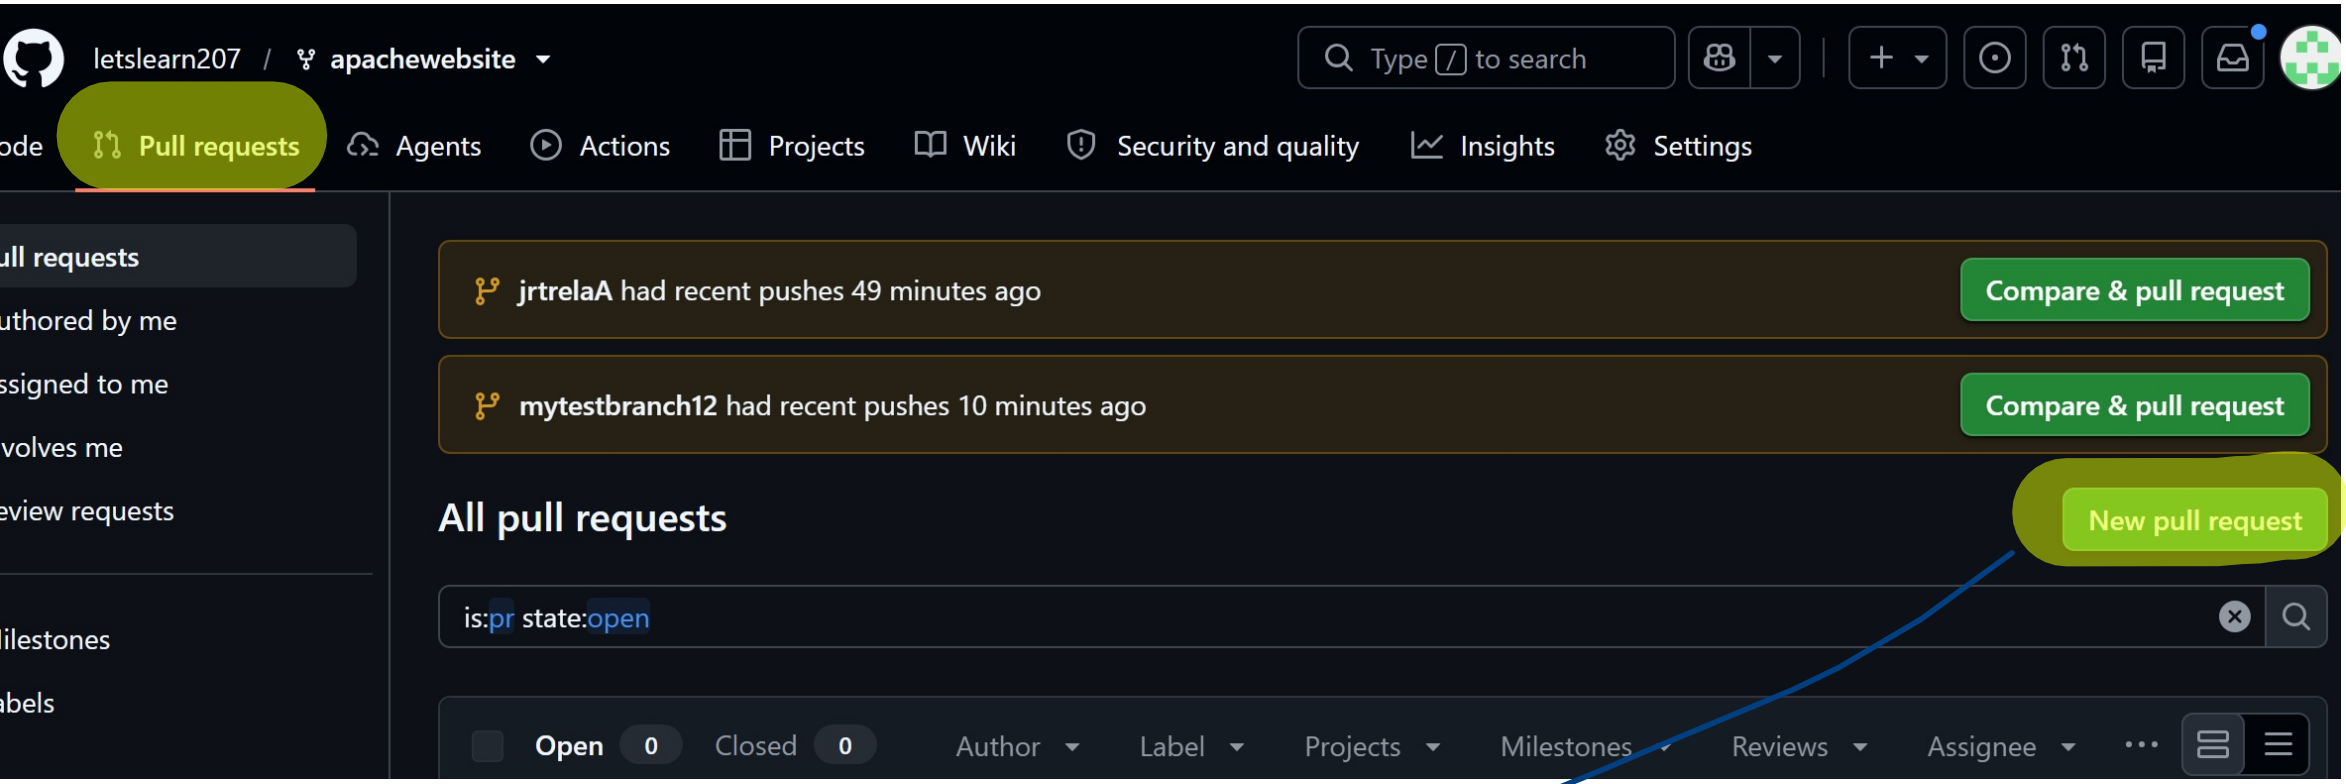

apache repo
github.com/letslearn207/apache-website

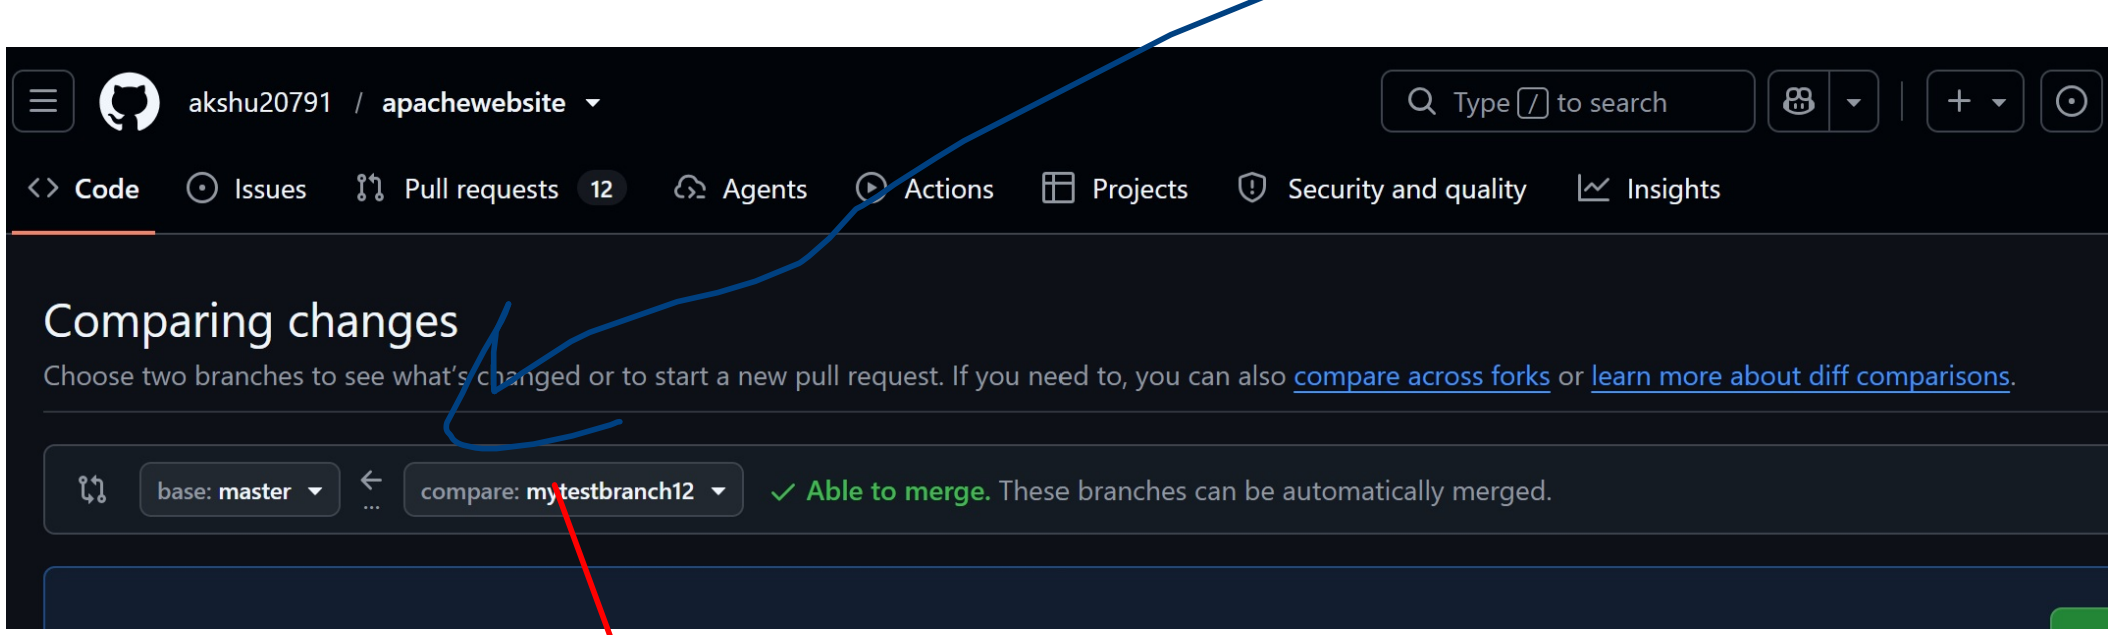

git clone github.com/letslearn207/apache-website
git branch mytestbranch12
touch akshat1233.txt
git add .
git commit -m"c1"
git push -u origin branch1

Now we want to merge our code with the master branch
we need to raise the PULL REQUEST (PR) with our repo owner to the team lead /manager

WHAT IS PULL REQUEST (PR)?
Pull request is a request to merge code changes from one branch to another..
in our case
our branch is mytestbranch12
we need to merge that branch with master branch as i have completed the work on that specific branch...i will raise the PR

merge the code from mytestbranch12 with master branch

Create pull request

put the the title

and create pull request

You will now reach out to the repo owner or team lead..saying you are done raising the PR and now you me to merge your code..

Now manager/repo owner will go to the PR and can check the content of pull request

Pull requests
